

Make Your Own Cloud

Create a Private Cloud Using Apple Hardware and Software

Why?

Why Your Own Cloud?

- Privacy
- Protection
- Multi-Platform Support

Privacy

- There is no “Cloud”
 - ▶ “Cloud” = “someone else’s computer”
 - ▶ “For convenience, I’m going to put my business’s critical data, plans, and secrets on someone else’s computer.”
- Cloud storage may not be secure
 - ▶ Who has the encryption key?
 - ▶ Service holds key = Government has key
- You are the product
 - ▶ There is no “free”

Google: 'Government surveillance is on the rise'

Nov. 13, 2012

<http://www.cnn.com/2012/11/13/tech/web/google-transparency-report/index.html>

The U.S. made 7,969 requests for users' Gmail and other Google data in the first six months of 2012.

(CNN) -- The tangled David Petraeus scandal highlights how easily the U.S. government can access citizens' private e-mails.

The FBI's request to access Paula Broadwell's personal Gmail account was one of 7,969 similar requests Google received from the U.S. government in the first half of 2012, according to Google and news reports. The company said it complied with the requests, either fully or partially, 90% of the time.

Protection

- Cloud data rights \neq home data rights
 - ▶ Online data does not have the same protections as data stored in your home

The Fourth Amendment does not prohibit the obtaining of information revealed to a third party and conveyed by him to Government authorities, even if the information is revealed on the assumption that it will be used only for a limited purpose and the confidence placed in the third party will not be betrayed.

—U.S. Supreme Court

<https://ssd.eff.org/your-computer/govt/privacy>

Reasonable Expectation of Privacy • EFF • Electronic Frontier Foundation

Protection

- Cloud data rights ≠ home data rights
 - ▶ Online data does not have the same protections as data stored in your home
- Who has access to your data?
 - ▶ Employees
 - ▶ Government
 - ▶ Law Enforcement
 - ▶ Companies
 - ▶ Criminals

Multi-Platform Support

- Does your cloud support both Macs, Windows, and iOS devices?
 - ▶ Can you share data/info with others?

No one is going to provide you a truly secure service for free.

—Common Sense

If you want something done right, do it yourself.

—Sal's Dad

OS X Server

OS X Server is the next generation of Apple's award winning server software. Designed for OS X and iOS devices, OS X Server makes it easy to share files, schedule meetings, synchronize contacts, host your own website, publish wikis, configure Macs, iPhones and iPads, remotely access your network, and more.

Calendar

The screenshot shows the macOS Calendar application in a weekly view for the week of November 4-10, 2012. The window title is "Calendar" and it features standard macOS window controls (red, yellow, green buttons) and a search bar. The sidebar on the left lists calendar sources: "On My Mac" (Home, Work), "OS X Server" (MacMania-15, MM-15 Allison, MM-15 Don, MM-15 Leo, MM-15 Sal, MM-15 Wally, SalCal), and "Subscriptions" (Birthdays). The main grid shows events for each day of the week. A large green block covers the entire week from Sunday to Saturday. Specific events are visible: "MacMania 15" (green bar, Nov 7-10), "Brisbane" (red bar, Nov 9), "Reading 101" (blue bar, Nov 8), "Turbocharge Your Mac Productivity" (red bar, Nov 10), "Hospitality Suite" (red bar, Nov 7), "IOS Productivity Tools" (purple bar, Nov 8), "It's All About the Numbers" (red bar, Nov 10), "Mountain Lion" (red bar, Nov 10), "Bon Voyage Cocktail Party" (red bar, Nov 7), "25 Things You Need to Know About OS X" (red bar, Nov 8), "MacMania Ingenious Bar" (yellow bar, Nov 8 and 10), and "Depart Sydney" (red bar, Nov 7). A monthly overview for November 2012 is shown at the bottom left, with the 3rd highlighted.
